- [Description](#)

10K NTC Metal - Thread

NTC stands for “Negative Temperature Coefficient”. NTC thermistors are resistors with a negative temperature coefficient, which means that the resistance decreases with increasing temperature. They are primarily used as resistive temperature sensors and current-limiting devices. The temperature sensitivity coefficient is about five times greater than that of silicon temperature sensors (silistors) and about ten times greater than those of resistance temperature detectors (RTDs).

Quick Spec

- Operating Temperature Range: -40°C to 140°C (dependent on wire rating)
- Insulation Strength: 1500 VDC/0.5 mA/2 Second
- Accuracy: 1°C typical
- Thermal Time Constant: 1-1.8 seconds typical in 25°C air to 85°C stirred water

Dimensions

UNIT: mm

Features

- Bodies in nickel-plated brass, stainless steel or others available
- Excellent moisture resistance
- Liquid temperature sensing
- Lumberg and AMP connector systems
